

Orchestrated the digital transformation to create an integrated omnichannel experience for a leading business fuel card provider

About the Client

A top-tier UK business fuel card provider operating in alliance with major supermarket chains for over two decades Offers cost-effective fuel card solutions to businesses, enabling savings at thousands of fuel stations Boasts an extensive portfolio of over 1,300 supermarket fuel stations as participating partners

Business Needs

| 01 | Engineer a mobile-first solution for seamless customer interaction and efficient account management | |
|----|---|--|
| 02 | Offer real-time fuel station location and pricing updates to enhance driver efficiency | |
| 03 | Facilitate secure, cloud-based transactions and automated fuel card operations | |
| 04 | Accommodate the increasing user demand seamlessly with scalable infrastructure | |
| 05 | Minimize manual administrative tasks and simplify backend processes | |
| 06 | Lead end-to-end product delivery lifecycle and automated the deployment process | |
| 07 | Implement and prioritize automation-first testing approach towards quality | |

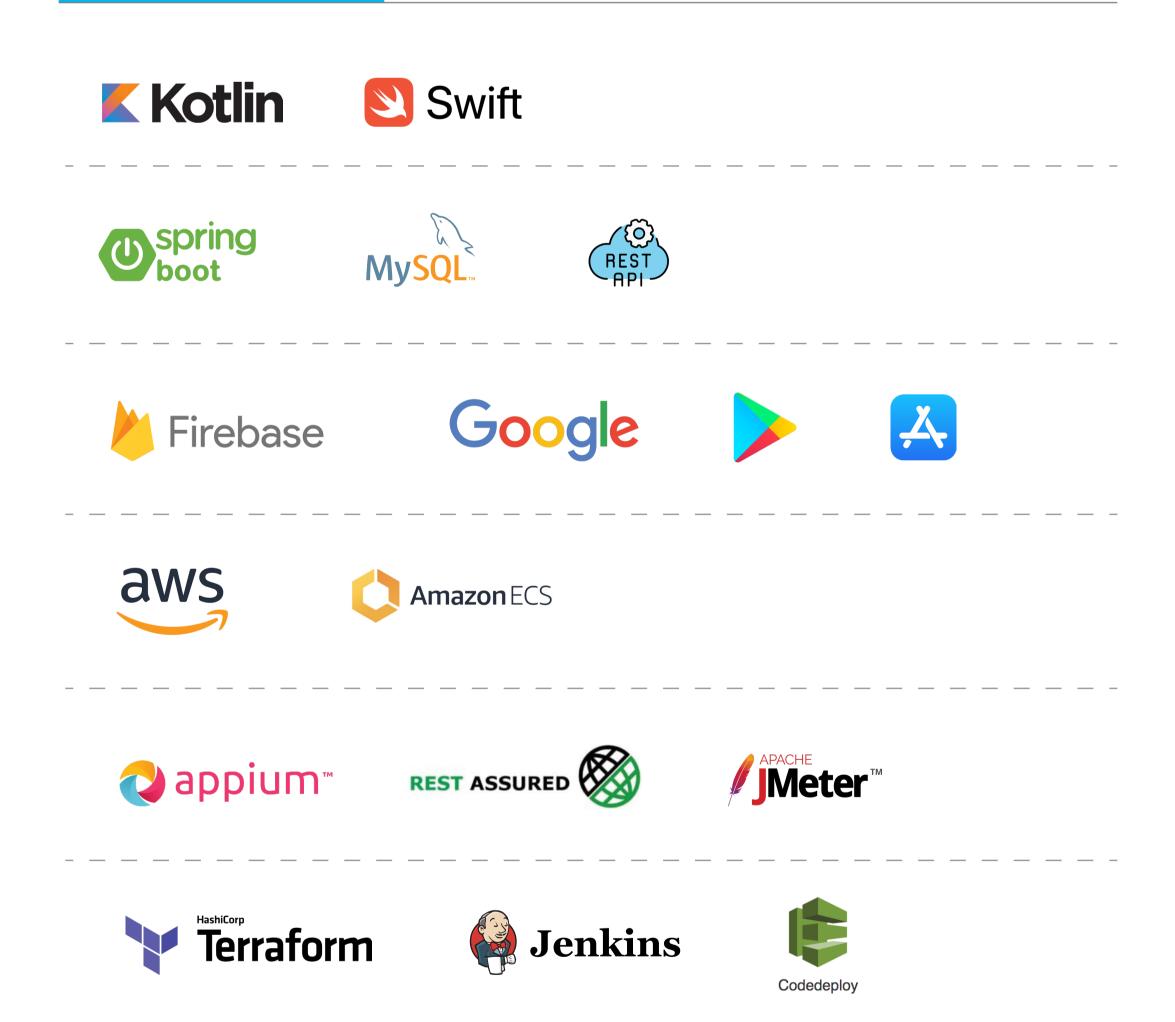

Solutions

Developed a feature-rich native mobile app (iOS & Android) for seamless user experience Integrated real-time fuel station locator and pricing tracker for improved decision-making Enabled automated account and fuel card management, reducing manual intervention Implemented a secure cloud-native backend architecture using AWS

| deployments | | | | |

Seamless REST and SOAP API integration with third-party services for smooth operations Implemented robust solutions to monitor, audit, and ensure the security and performance of the application

Technology Stack

| Enhanced driver efficiency by providing real-time station discovery and pricing updates | Reduced manual administrative efforts by 30–40% through automated account and card management | Boosted customer acquisition rates with faster onboarding of new customers |
|--|---|--|
| Enhanced scalability by migrating the legacy system to a cloud-native architecture on AWS | Ensured high availability with 99.9% uptime and secure transaction processing by deploying AWS cloud security best practices | Enabled faster rollouts by cutting deployment time by 50% through automated CI/CD pipelines |
